

The ultraflo

TEE-RX™

ultraflo®

Designed with the Operator in Mind

Ultraflo introduces a revolutionary design in bottom drop tee operation that emphasizes operator safety and ease of use. **The Tee-Rx** (patent pending) is engineered to place all operations necessary to open and close the tee within easy reach of the operator eliminating the need to squat or reach across trailer piping. **The Tee-Rx** also includes a retainer to assist in keeping the door completely out of the media's path and to conveniently locate the handle for closing the tee. These features enable the operator to both open and close the bottom drop door in one fluid movement with either hand or foot.

Competitor's door assembly extends down nearly 16 inches.

Designed to Protect Your Bottom Line

In order to reduce the potential for equipment damage, special attention has been paid to ensure that the **Tee-Rx** has adequate ground clearance.

The **Tee-Rx** door assembly hangs down 6" when fully open, compared to the competition's which can extend down nearly 16" if not pinned. This feature in combination with material selection

ensures the **Tee-Rx** will withstand the rigors and abuse of the most

demanding applications. The

ergonomic design of **Tee-Rx's**

operation also minimizes risk

of operator injury and

costly claims.

TEE-Rx is available in Ultraflo's proprietary

ULTRATUFF TEE

TOUGH, ABRASION RESISTANT MATERIAL
